

## Drug Information Service

SHELLY'S MEDICATION SERVICES uses on-line services and drug information databases including the Medline's and Medscape's drug information system. This easy to use service enhances the timeliness and quality of information provided. As important issues evolve they are communicated to key personnel at the facility via e-mail.

Further we monitor regulatory activities, in part through the Food and Drug Administration's "MedWatch" program and receive updates on all drug shortages, recalls and regulatory changes. This timely information enhances our ability to incorporate any changes to the policies and procedures of your facility and to notify you of all important recalls and shortages.
